LoanMirror

CYPHER 2026 / FINTECH & CONSUMER TRANSPARENCY

Know the real cost before you borrow.

A document-first way to verify what a loan ad promises — and what its terms actually say.

INDIAN AVENGERS / ROUND 1 PROTOTYPE VALIDATED ON SYNTHETIC DATA

ILLUSTRATIVE LOAN

12%

advertised nominal rate

₹10,000
sanctioned

₹9,410
actually received

A DIFFERENCE WORTH EXPLAINING →

An interest rate is not the whole loan.

Borrowers need to reconcile the ad, the KFS, and the cash that reaches their account.

WHAT THE AD LEADS WITH

12%

nominal annual interest

The ad may omit the full cash-flow picture.

WHAT THE DOCUMENTS + CASH FLOW SHOW

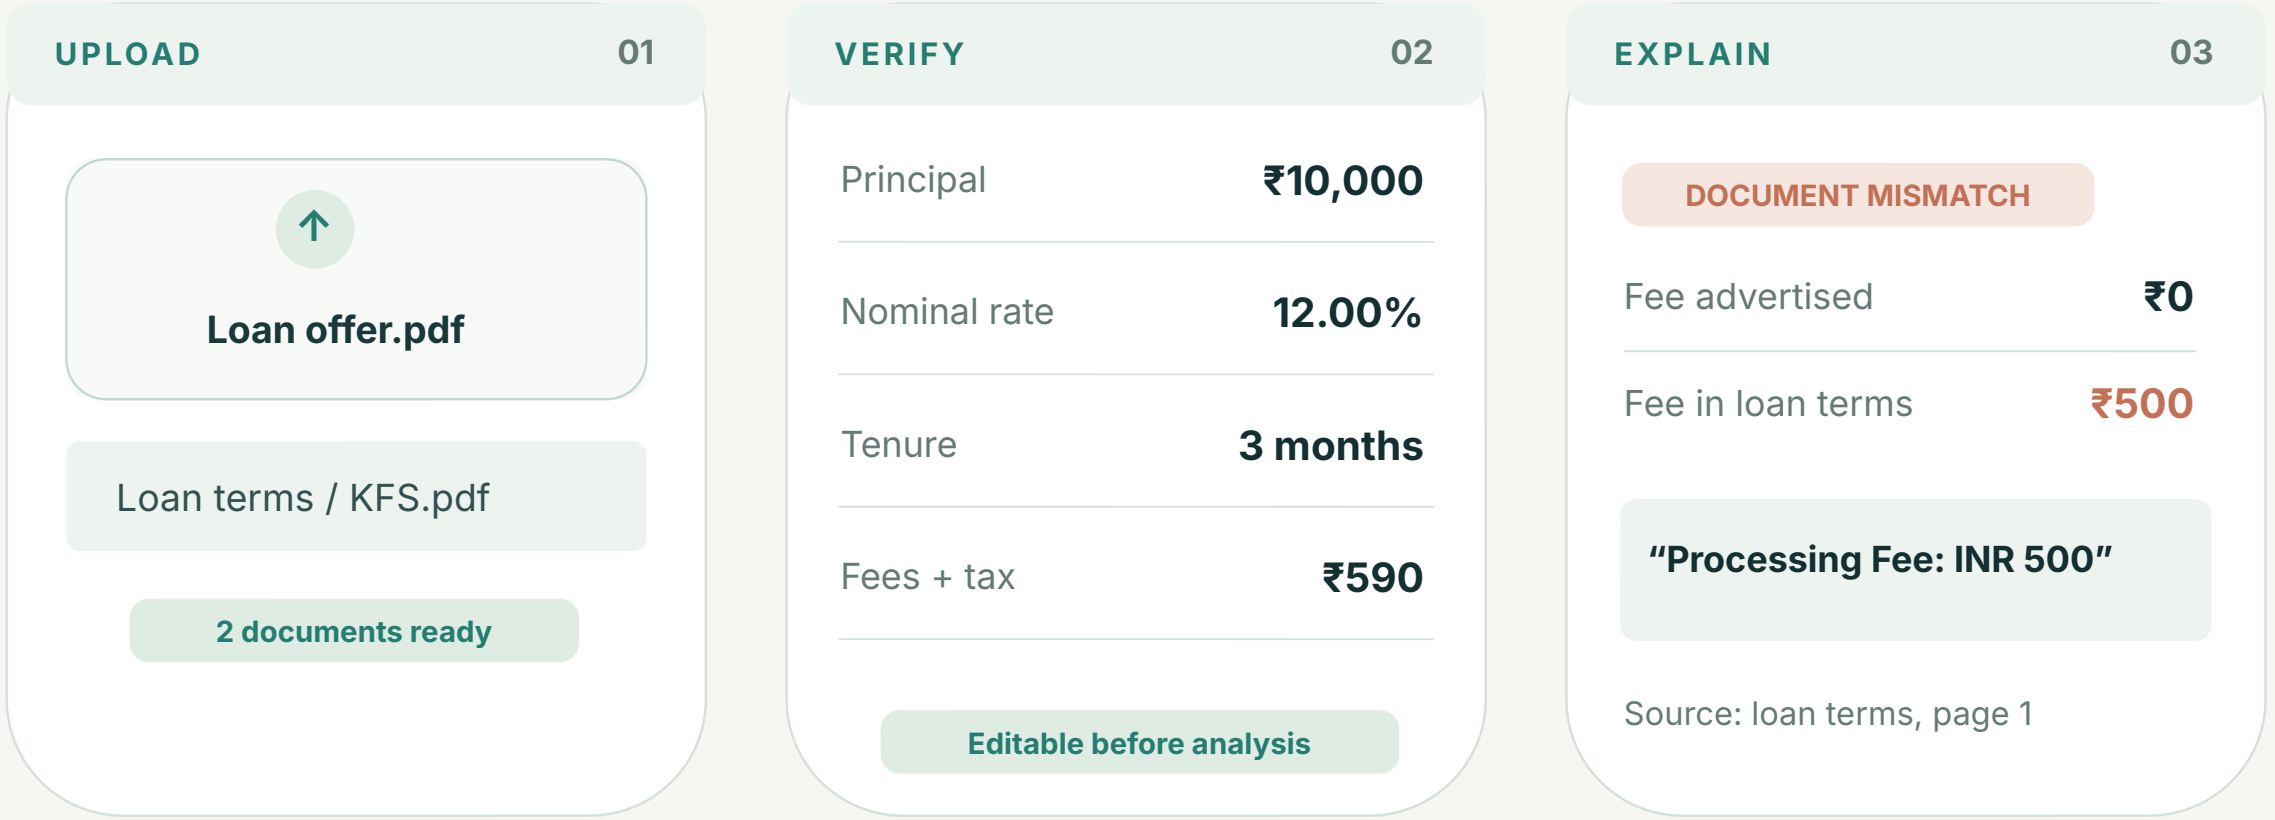

Sanctioned principal	**₹10,000**
Upfront fees + tax	**– ₹590**
Money received by borrower	**₹9,410**
Repayment total · 3 months	**₹10,200.66**

BORROWING COST ABOVE CASH RECEIVED: ₹790.66

The problem is not that APR and nominal interest differ. The problem is when key terms cannot be easily understood or reconciled.

A calmer way to understand the fine print.

A three-step interface that turns dense terms into traceable, human-readable findings.

Bring both documents

Review extracted fields

See the evidence

Every conclusion should lead back to evidence.

Use automation for extraction; keep the financial calculations transparent and reproducible.

WORKING IN THE PROTOTYPE

PDF text → editable fields → deterministic output

FUTURE EXTENSION

AI-assisted parsing for varied lender layouts

The prototype never treats an APR–nominal-rate difference as proof of deception.

Built to be checked, not merely believed.

Our differentiation is document reconciliation — with source excerpts and a reproducible maths engine.

CONTROLLED SYNTHETIC DEMO

15 / 15

synthetic document-pair scenarios verified

19 / 19 automated tests passed

WHAT WE CAN DEMONSTRATE

- **Extract 5 critical fields from generated PDFs**
- Flag directly conflicting fee / rate / tenure
- Recalculate EMIs and show supporting lines

WHAT IS NOT YET VALIDATED

Real lender formats / scanned PDFs / regulatory compliance

A scope-limited prototype with honest boundaries is stronger than an unverified “99% accuracy” claim.

An eight-hour build. A clear technical objective.

Prioritize a demo that works end-to-end before adding broad AI capability.

MUST WORK

Digital PDFs · Verified terms · Correct calculations · Evidence trail

STRETCH, NOT A PROMISE

OCR, diverse lender layouts, multilingual explanation, optional AI extraction
